 Portfolio

PERFIL

Full stack developer focused on ASP.NET Core, React/TypeScript, and PostgreSQL. I ship REST APIs, integrations (WhatsApp, Playwright-driven web automation), and maintainable frontends—emphasizing domain clarity, testing where it pays off, and repeatable deployments.

WORK EXPERIENCE

Junior Software Engineer

PC INGENIERIA

- Owned an end-to-end automation system (ASP.NET Core, PostgreSQL, React/TSX) with background jobs, replacing manual flows and reducing operational errors in capture and follow-up.
- Delivered Playwright automation against external portals (e.g. SIC) and a WhatsApp Web notification engine with session persistence and database-backed traceability.
- Refactored legacy web apps: removed critical console errors, reduced hot-path latency, and improved performance and SEO metrics.
- Managed relational modeling with PostgreSQL and EF Core (migrations, referential integrity) for automation records and reporting.

06/2025 - Present

FEATURED PROJECTS

CoworkingReservations

.NET 10 • Entity Framework Core • PostgreSQL • SignalR • WebSockets • JWT • Clean Architecture

Coworking management system with real-time bookings (SignalR) and .NET 10 API — currently in production for a real venue.

There is no public live demo. The project is in production for a real coworking space. You can review the code on GitHub or contact me for a guided demo.

[Backend](#)

MotorOn

React • TypeScript • Tailwind CSS • .NET 10 • Entity Framework Core • PostgreSQL • JWT • CQRS/MediatR • Clean Architecture

Fullstack fleet management system: fuel control, maintenance, ITV, insurance and incidents — .NET 10 backend + React frontend.

Completed project, not yet deployed. You can review the code in the GitHub repositories (frontend and backend).

[Frontend](#) [Backend](#)

TaskManager

React • TypeScript • .NET 10 • Entity Framework • PostgreSQL • JWT

Team task management with roles, a Kanban board, and a secure API — fullstack .NET + React project.

There is no public live demo; explore the code and flow in the GitHub repositories.
